EDUCATIONAL FRAMEWORK

The Bitcoin Learning Path

MANDATORY SEQUENCE

Structured Sovereign Intelligence

Bitcoin is not a single technology; it is a convergence of cryptography, economics, and game theory. To understand it, you must follow the architectural logic of its creation.

Validated by Institutional Educators

1

The Problem With Money

Understanding the history of central banking, inflation, and why the current global financial system is fundamentally designed to erode your purchasing power.

2

Why Bitcoin Was Created

Analyzing the 2008 financial crisis and the Genesis Block. Deciphering Satoshi Nakamoto's intent for a peer-to-peer electronic cash system.

3

How the Blockchain Works

Demystifying the distributed ledger. How nodes agree on the state of the network without a central authority.

4

Mining and Network Security

The Proof-of-Work algorithm. How energy is transformed into the most secure network in human history.

5

Private Keys and Self-Custody

The ultimate level of sovereignty. Understanding the math of ownership: "Not your keys, not your coins."

6

The Lightning Network

Scaling Bitcoin for global commerce. How Layer 2 enables instant, near-free transactions for 8 billion people.

This is exactly how Bitcoin From Scratch is structured. 34 3D animated lessons. Start at the beginning - not in the middle.
